- Conforms to ISO15426 -1 and -2 Bar Code Verifier Specification
- Traceable to NIST (National Institute of Standards and Technology)
- Auto-discriminates between all popular symbologies
- Accurate display of the 'X' dimension/Magnification
- Automatic variable aperture size
- Multiple scan averaging
- Traditional analysis also provided
- USB connection
- Free lifetime software upgrades

#### Summary

The Omni bar code verifiers are desktop bar code verifiers where the bar code is placed face down on the top of the unit. The design ensures that the image is calibrated and in focus resulting in superior accuracy and repeatability.

Two models are available (different field of view):

- Omni Standard - Field of view 3.94" x 2.95" with a min X dim of 9.0 mil
- Omni XL - Field of view 5.91" x 4.41" with a min X dim of 14.0 mil
- Omni CRD - Field of view 3.46" x 2.60" with a min X dim of 8.3 mil
- Omni Wide Angle - Field of view 5.91" x 4.53" with a min X dim of 7.5 mil
- Omni HD - Field of view 3.94" x 2.95" with a min X dim of 6.0 mil

To inspect a bar code, simply place the verifier over your symbol and push the button. Grading is automatically performed and the results are quickly displayed on the screen with a graphical interface highlighting for operators where any potential problems exist.

The high level of accuracy and repeatability ensure compliance with health-care and pharmaceutical demands.

**The Omni series is the most complete handheld ISO/ANSI verifier from Webscan**

The Webscan Omni series meets the International Organization for Standardization's "Bar Code Print Quality Test Specification (ISO 15416 and ISO 15415) for both linear and 2D bar codes. It also meets International Organization for Standardization's "Bar Code Verifier Conformance Specification" (ISO 15426-1 and ISO15426-2).

Simply install the software on your computer, plug in the verifier and you can be confident that your barcodes are being checked to the highest standards. Exclusive software features including .csv file saving and GS1 Application Identifier (AI) Data Content testing.

The Webscan Omni Verifier, when used in conjunction with the accurately produced calibration sheet, forms an integral part of your ISO 9000 quality control procedures. Free software updates for life are downloadable from our website, ensuring that the instrument will remain at the leading edge.

A printed report can be produced on any connected printer. The report will be automatically resized to suit the output media including self-adhesive labels. Printouts include all the main verification information.

This equipment and its documentation were developed to fit into your company's existing ISO 9000/9001/9002 policies and procedures.
